 $p = 0.0156$

64-line edits  
 $p = 0.0687$

Four agents; no dependency; relocation 0. Dashed model  $C(n,2)p\lambda^2\tau$  applies only to overlap pairs.

95% normal intervals across available seeds; conflict size excludes seeds with no conflict.

Short-edit conflict sizes remain nearly flat; vertical scales differ between columns.
